Capstone

Assignment 1: Meeting Debrief

We met on February 13th and discussed the foundational aspects of the capstone class, focusing on how it relates to the MSCISBA program. We discussed the utilization of GitHub as a central repository for showcasing our past academic works. This platform will not only store assignments from the core areas that are Networking and Cybersecurity, Data Analytics, Data Management, and Software Systems but also host our capstone project. The project will demonstrate the integration between these areas by showcasing the knowledge and skills acquired throughout the program.

We also explored the connection between my participation in the CFA Research Challenge and the field of Data Analytics.

To advance in the capstone project, I will focus on my self-assessment to identify my strengths and areas for improvement in terms of competencies and skills.

Following this self-assessment, I will meet with Dr. Jennex to discuss my findings, with an initial focus on Networking and Cybersecurity.
